

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Third Quarter 2011

New Home Market

Second Quarter Housing Starts Stabilize

The pace of new home construction moderated only slightly in the second quarter following a positive start to the year due to ongoing strength in townhouse starts. Single-detached construction in the Windsor Census Metropolitan Area (CMA), although weaker, began gaining momentum in the second quarter and closing the

gap compared to the same period one year earlier. By submarket within the CMA, single-detached construction was up or on par in three of the five markets for the first half of the year. Townhouse starts were up nearly 60 per cent in the second quarter and distributed across the CMA. These units were all built for the ownership market and have been received well with only a few of the units which were completed still available for sale. Many baby boomers and professionals are attracted to this maintenance-free,

community lifestyle as an alternative to other homeownership options.

New Home Prices Continue to Rise

Despite weaker demand for singledetached homes, the average price continued to rise due to an increasing share of homes priced in the \$350,000 - \$449,999 range. Many of these homes were built in the municipalities surrounding the City, such as Lakeshore Township and the Town of LaSalle, where large lots are available. In the Township of Lakeshore, three times as many new homes were completed and sold in the second quarter of 2011 as in the same period one year early. Most had prices in the \$350,000-\$449,999 range. The market segment to lose share was homes within the City of Windsor priced below \$250,000. Homebuyers looking in this range would have a wide range of listings available in the resale market from which to choose. Fewer sales in the low price range in the City of Windsor contributed to the 16 per cent year-over year gain in the average price for a new single-detached home in the second quarter.

Resale Market

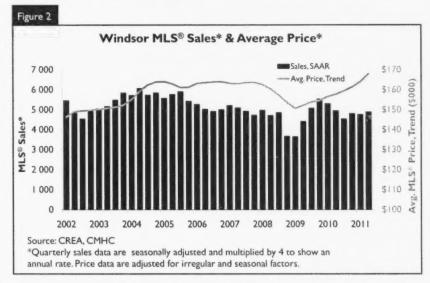

More Move-up Activity Drives Up Prices in Second Quarter

An increased number of transactions was evidence that demand for resale homes in the Windsor-Essex area rose in the second quarter of 2011. Sales through the Multiple Listings Service® were up nearly three per cent from the first quarter of 2011 on a seasonally adjusted basis.

Employment levels in the second quarter dipped slightly, however, full time employment for the 45-64 age group, prime move-up buyers, was up strongly year-over-year. The increasing number of full-time jobs during the second quarter supported stronger housing demand. Several recent announcements regarding new employment opportunities in the green technology and energy sector have contributed to a more positive outlook for the area. The ongoing infrastructure projects under construction along with a more stable auto sector have all played a part in stabilizing the number of people who were leaving the area in search of employment in previous years.

Windsor is an appealing homeownership market as it is the most affordable CMA in Southern Ontario. The average price of a home sold through the Windsor-Essex Real Estate Board surged in the second quarter, surpassing the previous high set in 2006. Most sales were in the higher price ranges, indicating that move-up buyers were actively purchasing homes in the second quarter. Sales of homes which appeal to first-time buyers, generally those with prices under \$140,000, dropped from nearly 52 per cent of sales in the first quarter to 42 per cent of sales in the second quarter.

The number of new listings was on par with second quarter figures for 2010. The increase was a little stronger than the increase in sales, but the sales to new listings ratio indicated the market remained in balanced territory. Homeowners are taking notice of rising property values and becoming more interested in listing their home with the aim of finding another which more closely meets their needs.

MLS® is a registered trademark of the Canadian Real Estate Association (CREA).

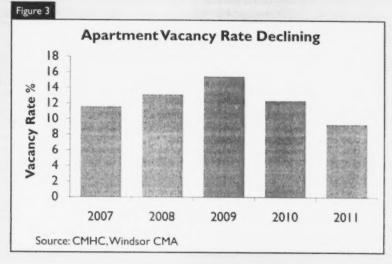

Windsor Rental Vacancy Rate Moves Lower

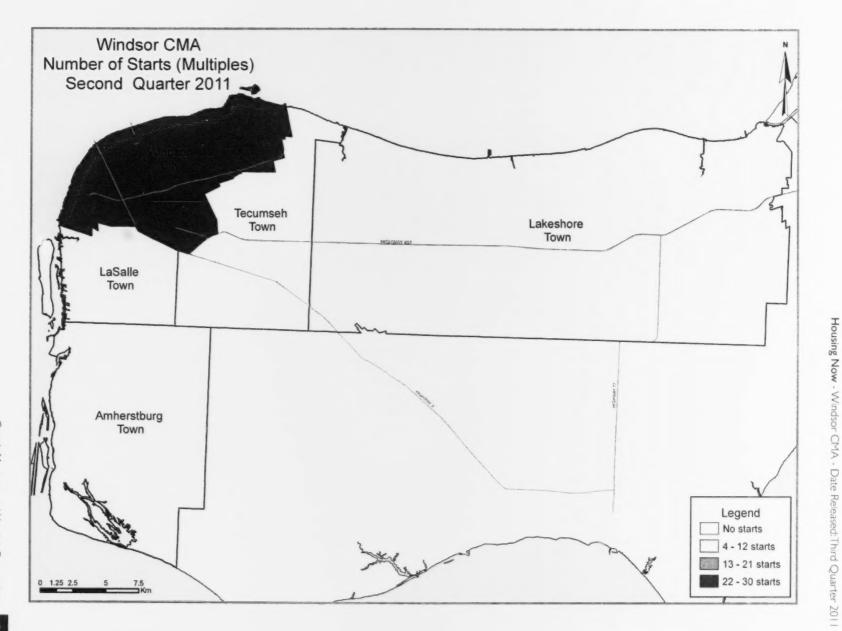

According to CMHC's Rental Market Survey, the April 2011 vacancy rate moved down from more than 12 per cent in 2010 to 9.4 per cent. The vacancy rate was impacted by increasing international migration to Windsor which has been rising over the past year. A global economic recovery led to less

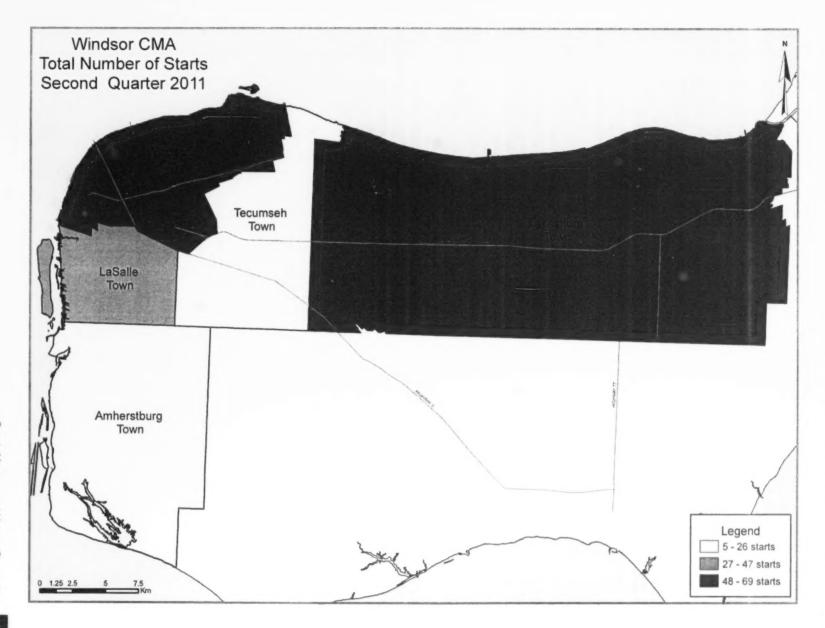

uncertainty and likely encouraged more international travel. Immigrants typically lack the savings and work experience to qualify for homeownership. Approximately 75 per cent of immigrants opt for rental accommodation when first arriving in Canada.

Demand for rental units was also supported by the fact that fewer renters made the shift to homeownership market in Windsor in 2011. Many had made their purchase in 2009 when the drop in mortgage rates made had conditions

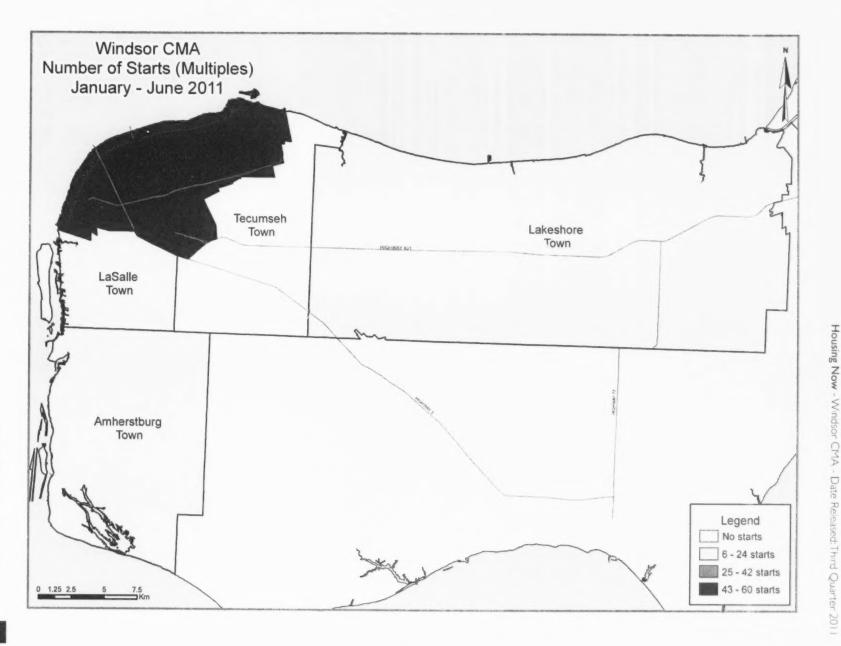

very conducive to move into ownership. Current renters still need some time before they are ready for this transition. Consequently, fewer tenants are vacating their rental suites, putting downward pressure on the vacancy rate.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "starrt", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 10,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
